

# **LinMot® Linear Rotary Motors**

Version 3.11

---

## CAUTION

LINMOT SLIDERS CONTAIN NEODYMIUM MAGNETS WHICH MAY DISTURB OR DAMAGE MAGNETIC DATA CARRIERS AND DELICATE ELECTRONIC EQUIPMENT MERELY BY COMING CLOSE TO THEM.

WHEN HANDLING SLIDERS BE AWARE THAT, DUE THE STRONG MAGNETIC ATTRACTION, INJURY FROM FINGERS BEING PINCHED BETWEEN THE SLIDER AND NEARBY STEEL ITEMS IS A VERY REAL POSSIBILITY IF CAUTION IS NOT EXERCISED.

THE SLIDERS OF LINMOT® MOTORS CAN REACH TEMPERATURES WHICH MAY CAUSE BURNS UPON BEING TOUCHED.

THE SLIDERS AND SHAFTS OF LINMOT® LINEAR ROTARY MOTORS ARE FAST-MOVING MACHINE ITEMS. THE USER MUST TAKE ALL NECESSARY PRECAUTIONS TO PREVENT THEIR BEING TOUCHED (PROVIDE COVERS, PROTECTION AGAINST TOUCHING ETC.).

DO NOT RUN INTO THE INTERNAL MECHANICAL END STOPS.

Linear Rotary Motors PR01-52 and PR01-84

## Overview

### LinMot PR01 Linear Rotary Motors

The LinMot PR01 series of Linear Rotary Motors includes various sizes that differ primarily in the maximum torque available from the rotary motor or the linear force available from the linear motor. In addition to the different sizes, variants with axial through-holes (for a pneumatic line or an ejector, for example) and Stainless Steel models are available.

A Linear Rotary Motor fundamentally consists of a linear motor with an attached rotary torque motor. The two motors are electrically independent units and can be controlled completely independently of each other.

1. Rotary Motor
2. Linear Motor
3. Shaft (moves linear and rotating)
4. Slider of the Linear Motor (moves linear)
5. Option: Heat sinks for Linear Motor
6. Option: Clamp Set for load attachment
7. Option: Fan Kit for Rotary Motor
8. Option: Wiper
9. Option: MagSpring Kit UNO
10. Option: MagSpring Kit DUO
11. Option: Cam Kit
12. Option: MagSpring Kit SYM

More combinations available

## Variants model PR01-52

PR01-52x40-R/37x120F-HP-C-80	(solid shaft)	Item No.: 0150-1573
PR01-52x40-R/37x120F-HP-C-80-L	(hollow Shaft)	Item No.: 0150-2703
PR01-52x60-R/37x120F-HP-C-100	(solid shaft)	Item No.: 0150-1197
PR01-52x60-R/37x120F-HP-C-100-L	(hollow Shaft)	Item No.: 0150-2704
PR01-52x60-R/37x120F-HP-C-150	(solid shaft)	Item No.: 0150-2705
PR01-52x60-R/37x120F-HP-C-150-L	(hollow Shaft)	Item No.: 0150-2706

## Variants model PR01-52 with planetary gear

PR01-52x60-R/37x120F-HP-C-100-G05 gearbox 5:1	Item No.: 0150-2648
PR01-52x60-R/37x120F-HP-C-100-G10 gearbox 10:1	Item No.: 0150-2647

## Variants model PR01-84

PR01-84x80-C/48x240F-C-100	(solid shaft)	Item No.: 0150-1194
PR01-84x80-C/48x240F-C-100-L	(hollow Shaft)	Item No.: 0150-1196
PR01-84x80-C/48x360F-C-100	(solid shaft)	Item No.: 0150-1199
PR01-84x80-C/48x360F-C-100-L	(hollow Shaft)	Item No.: 0150-1200
PR01-84x80-C/48x240F-C-150	(solid shaft)	Item No.: 0150-1187
PR01-84x80-C/48x240F-C-150-L	(hollow Shaft)	Item No.: 0150-1188
PR01-84x80-C/48x360F-C-150	(solid shaft)	Item No.: 0150-1168
PR01-84x80-C/48x360F-C-150-L	(hollow Shaft)	Item No.: 0150-1166
PR01-84x80-C/48x240F-C-300	(solid shaft)	Item No.: 0150-1580
PR01-84x80-C/48x240F-C-300-L	(hollow Shaft)	Item No.: 0150-2554

## Variants model PR01-84 in 'Stainless Steel'

PR01-84x80-SSC-C/48x240F-C-150	(solid shaft, Stainless Steel )	Item No.: 0150-1581
PR01-84x80-SSC-C/48x240F-C-150-L	(hollow Shaft , Stainless Steel )	Item No.: 0150-1582
PR01-84x80-SSC-C/48x360F-C-150	(solid shaft, Stainless Steel )	Item No.: 0150-1579
PR01-84x80-SSC-C/48x360F-C-150-L	(hollow Shaft Stainless Steel)	Item No.: 0150-1583
PR01-84x80-SSC-C/48x240F-C-300-L	(hollow Shaft Stainless Steel)	Item No.: 0150-2555

## Variants model PR01-84 with planetary gear

PR01-84x80-C-G/48x240F-C-150-G05	gearbox 5:1	Item No.: 0150-2531

**NOTE: Gearbox motors may regenerate a lot of energy into the DC-Link → use drives with brake resistor or use additional DC-Link capacitor (10'000 uF)**

## Torque-Speed Curve Rotary Motors

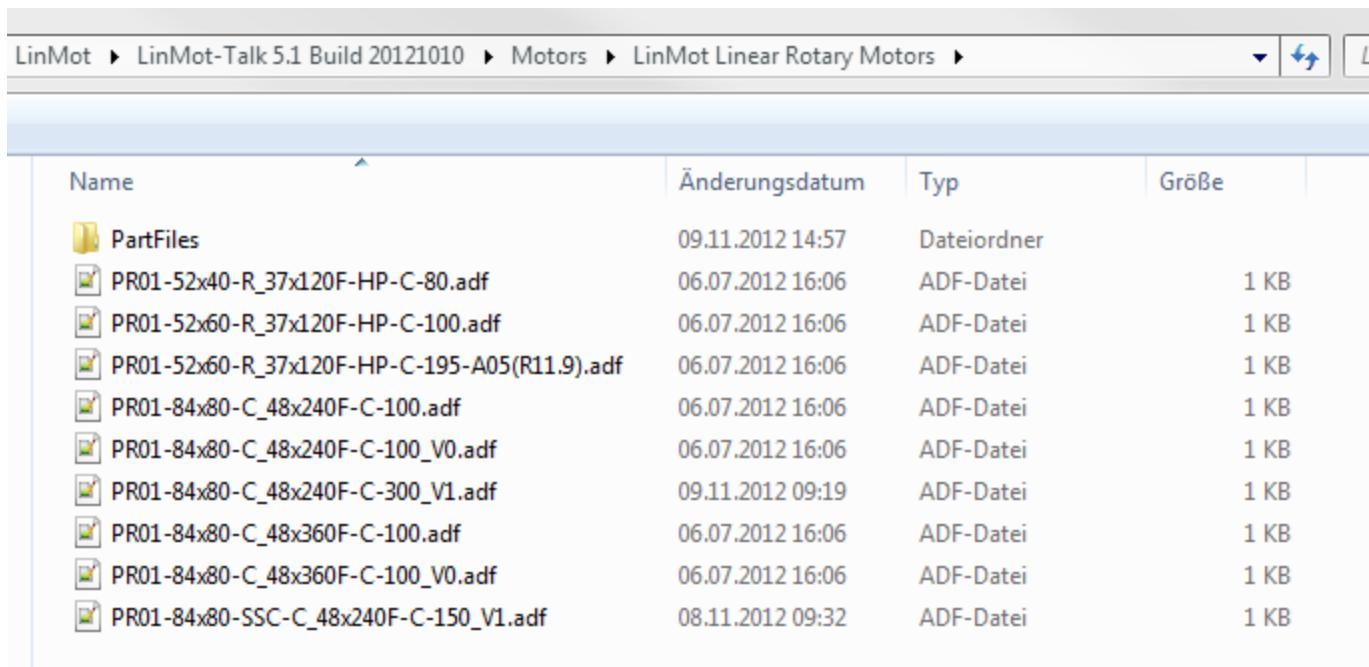

## Startup

The linear motor and rotary motor are electrically independent units. This means that the Linear Rotary Motor can be started up sequentially. It makes no difference which motor (linear or rotary) is started up first.

## Drive settings

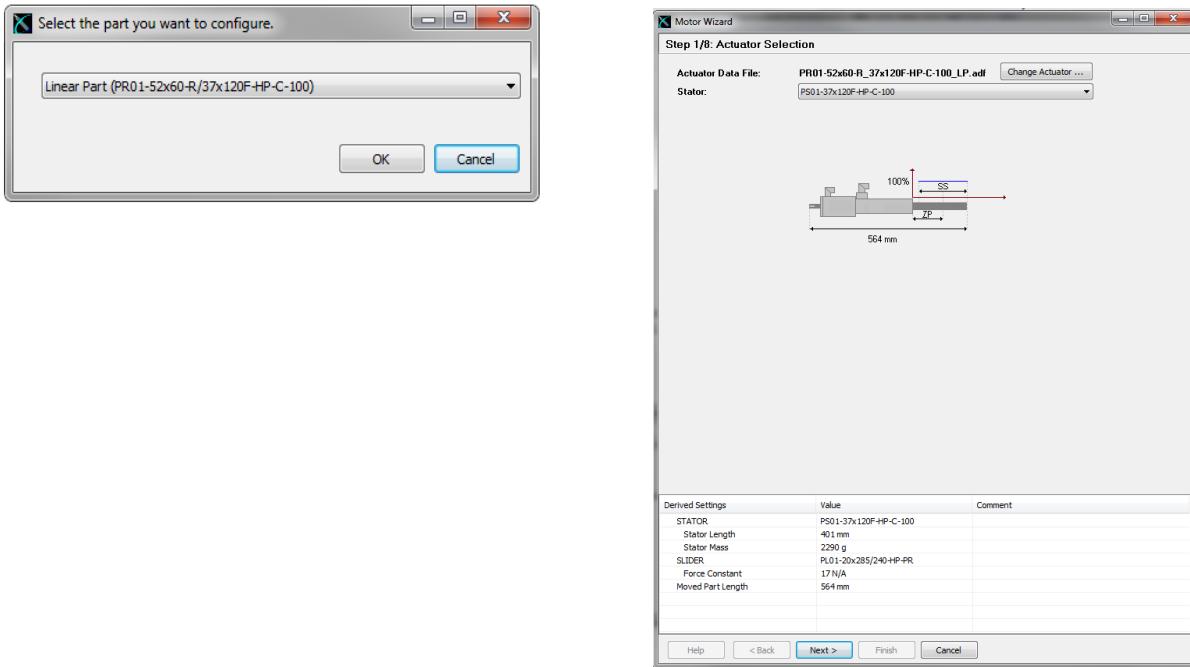

The various parameters for the linear motor and the rotary motor are set using the corresponding wizard in the LinMot Talk configuration program. (Contact LinMot Support if you do not see the folder "Motors\LinMot Linear Rotary Motor".)

The Linear Rotary Motors are located in the folder "Motors\LinMot Linear Rotary Motors". It makes no difference whether the linear or rotary motor is configured first.

## Configuration Linear Motor

Figures: LinMot-Talk Motor Wizard: Linear part Actuator Selection

## Configuration Rotary Motor

Figures: LinMot-Talk Motor Wizard: Rotative Part Actuator Selection

## Homing the Rotary Motor

No homing is necessary, because the rotary motor uses an absolute measurement system (single turn).

## Homing the Linear Motor

If the linear motor is homed to the internal stop of the Linear Rotary Motor, then the maximum homing velocity must be no greater than 0.01 m/s.

## Example of VAI motion with Rotary Motor

The LinMot Talk program uses units on the parameter page the same way they are used to actuate linear motors. In order to control a rotary motor, therefore, a ratio between one motor revolution ( $360^\circ$ ) and the linear travel distance must be defined (**by default, 1 revolution through  $360^\circ$  corresponds to a linear travel distance of 36 mm**).

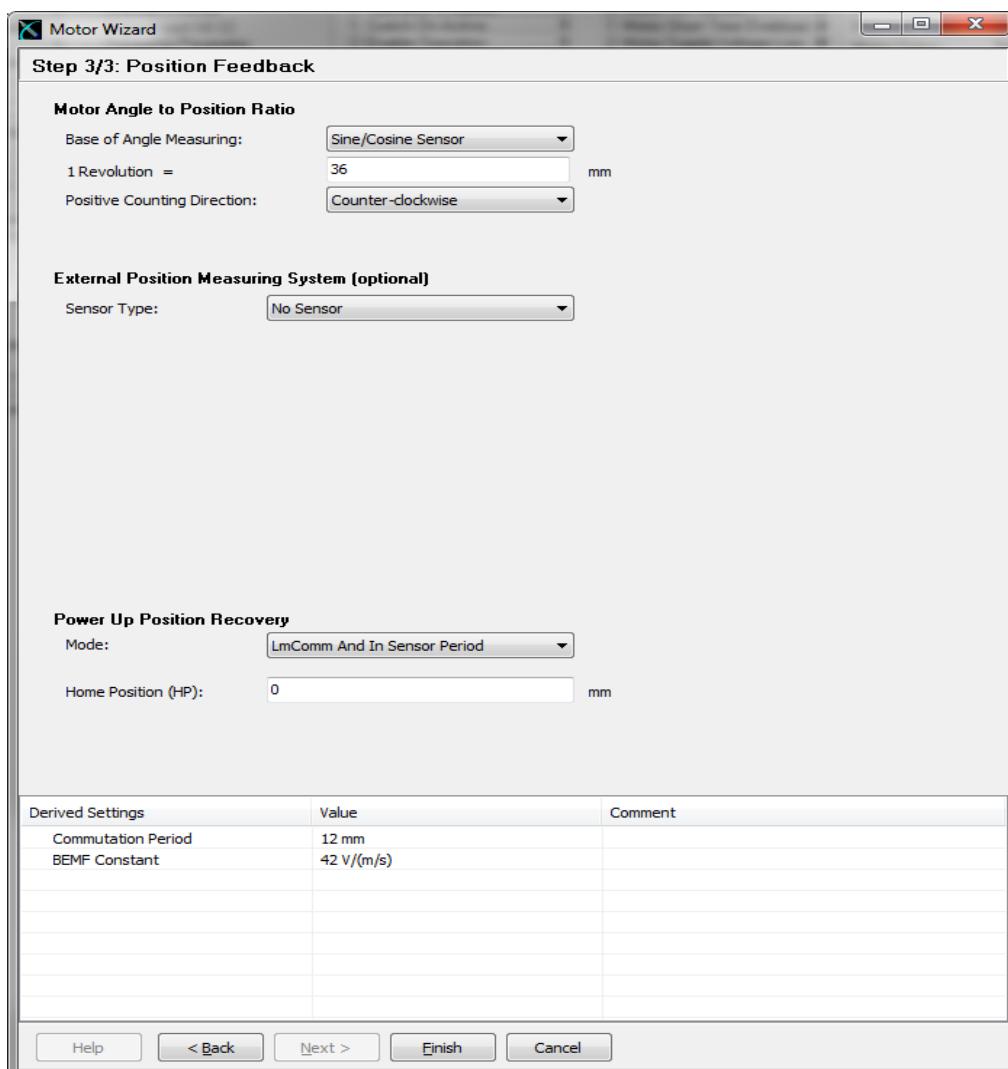

Figure: Motor Wizard: Motor Angle to Position Ratio

The ratio can be freely defined. Keep in mind that the "position" parameter type is defined as a 32-bit value and the maximum position resolution is 0.1 µm. This means that the maximum stroke is limited to between -214748 mm and 214748 mm.

Position [ mm]	-214748 to 214748
<b>1 revolution = 36 mm (1° == 0.1 mm)</b>	<b>Maximum number of revolutions = 11930 (recommended)</b>
1 revolution = 360 mm (1° == 1 mm)	Maximum number of revolutions = 1193

The ratio, however, affects not only the positions but also the PID controller. The table below shows an example of this:

P [A/ mm]	5
1 revolution = 36 mm (1° == 0.1 mm)	For a deviation of 1°, the drive reacts with 0.5 A
1 revolution = 360 mm (1° == 1 mm)	For a deviation of 1°, the drive reacts with 5 A

**This means that if the "Motor Angle to Position Ratio" is changed, the controller parameters must be (manually) adjusted as well.**

## Example of motion using a VAI motion command

A VAI Motion Command (motion using the Velocity Acceleration Interpolator) can be started directly via the LinMot Talk program.

### **1) Definition of the movement:**

Number of revolutions	25
Acceleration phase	100 [ms]
Maximal velocity	1500 [rpm]
Delay	50 [ms]
1 Revolution	36 [mm]

### **2) Converting the rotary parameters into the linear system:**

$$\text{Target Position [mm]} = \text{Number of revolutions} * 36 [\text{mm}] = 900 [\text{mm}]$$

$$\text{MaximalVelocity [m/s]} = (1500 [\text{1/min}] * 0.036 [\text{m}]) / 60 = 0.9 [\text{m/s}]$$

$$\text{Acceleration [m/s}^2\text{]} = \text{MaximalVelocity [m/s]} / 0.1 [\text{s}] = 9 [\text{m/s}^2]$$

$$\text{Deceleration [m/s}^2\text{]} = \text{MaximalVelocity [m/s]} / 0.05 [\text{s}] = 18 [\text{m/s}^2]$$

## 3) Entering the parameters in LinMot-Talk → Control Panel → Motion Cmd Interface

Enable Manual Override:

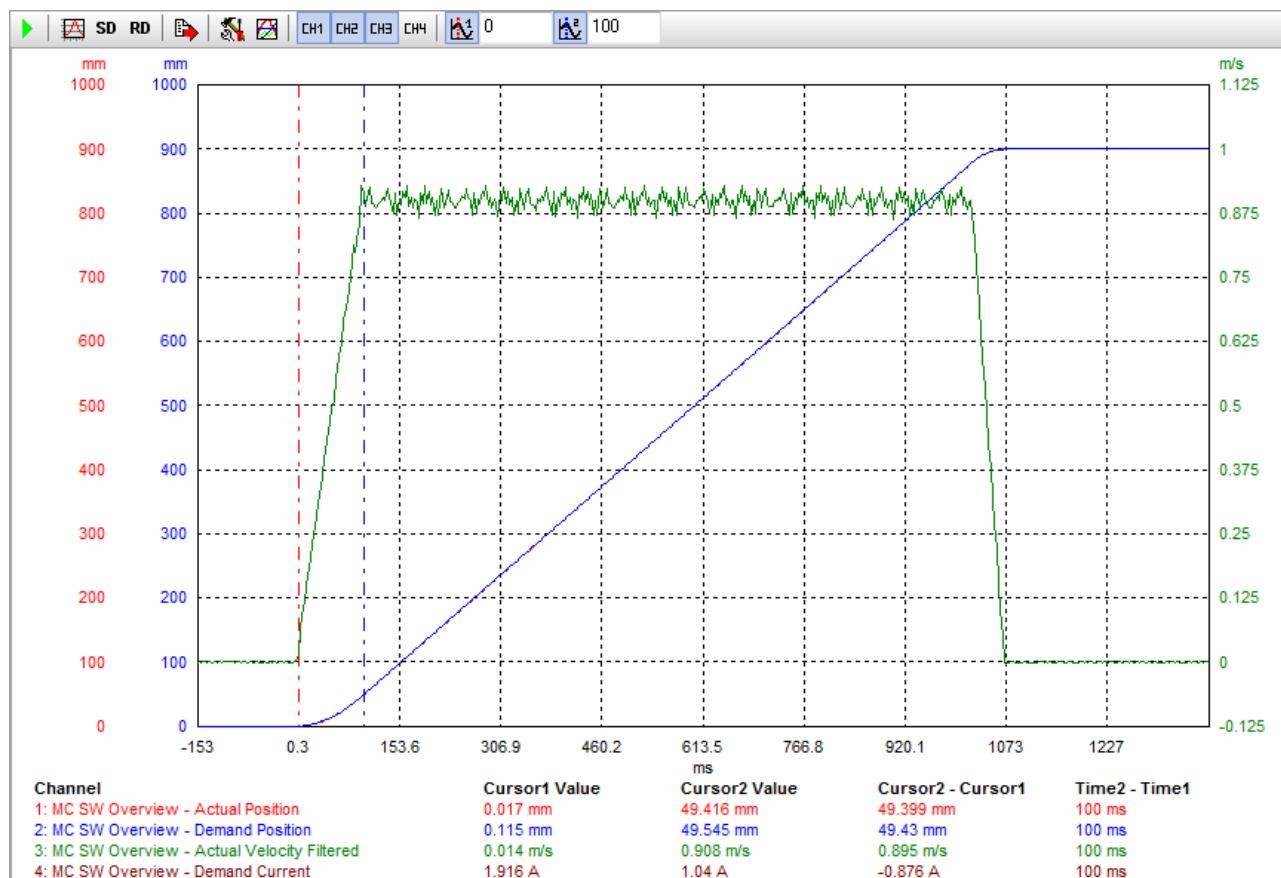

Command Category:

Command Type:

Count Nibble (Toggle Bits):   Auto Increment Count Nibble

Name	Offs.	Description	Scaled Value	Int. Value (Dec)	Int. Value (Hex)
Header	0	010xh: VAI Go To Pos	257	257	0101h
1. Par	2	Target Position	900 mm	9000000	00895440h
2. Par	6	Maximal Velocity	0.9 m/s	900000	000DBBA0h
3. Par	10	Acceleration	9 m/s <sup>2</sup>	900000	000DBBA0h
4. Par	14	Deceleration	18 m/s <sup>2</sup>	1800000	001B7740h

Using the oscilloscope (integrated in LinMot-Talk Software), the motion can be recorded and the PID control parameters can be adjusted as needed.

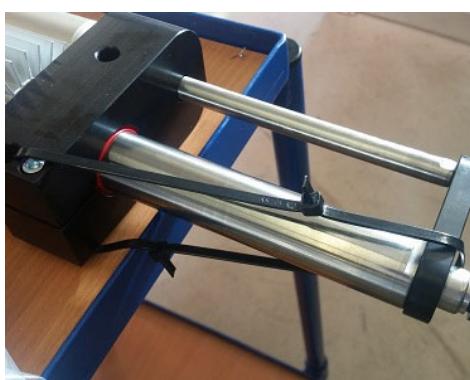

Picture: LinMot-Talk - Oscilloscope

## Notes on operating the Linear Rotary Motor

### **Running in the mechanical end stop may damage the motor**

During operation the linear motor must not be allowed to strike the upper or lower internal stops, as this can cause damage to the Linear Rotary Motor. The internal stops can be used for homing purposes, but the homing speed must not exceed the value of 0.01 m/s. Specially by using a MagSpring for the weight balancing and no payload is attached, the MagSpring may shoot the unit into the internal stop and damage the unit! Use an external stop ring attached to the rod or cable tie holding an adapter to prevent this situation. -->Do not remove the stop ring/cable tie as long as no payload is mounted!

Figures: External stop ring attached to the rod / cable tie holding an adapter

### **Strategy for the linear and rotating movement**

The Linear Rotary Motor is designed to execute linear and rotary motions simultaneously. This means that the rotary and linear motions can be executed simultaneously and completely independent of one another. If the application permits, however, the following guidelines should be followed for physical technical reasons:

Rotary motions should be performed with the linear axis retracted if possible, as this can reduce vibrations and mechanical loads due to asymmetrical load mass. Execute rotary and linear motions sequentially, which makes the load on the electrical power source more uniform and thus leads to greater energy efficiency.

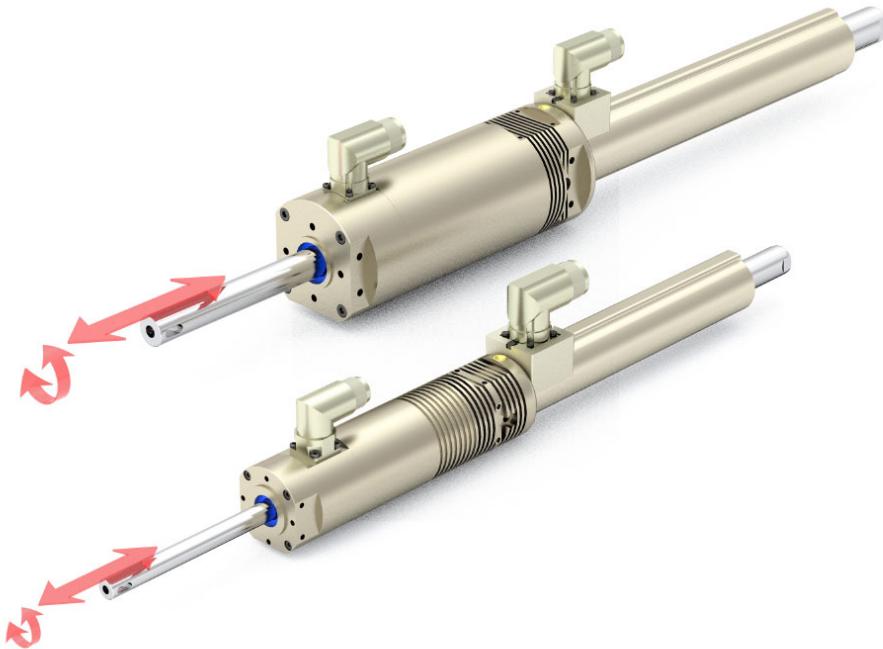

Figure: linear and rotative motion

## Linear Rotary Motors with planetary gear

Linear Rotary Motors with planetary gear will be used in all applications with high moment of inertia or high torque requirement.

### Model PR01-52 with planetary gear

Figure: PR01-52x60-R-G/37x120F-HP-C-100-G05

### Model PR01-84 with planetary gear

Figure: PR01-84x80-C-G/48x240F-C-150-G10

## Stainless Steel variant of the PR01-84x80-SSC series

In addition to standard Linear Rotary Motors, variants made of chromium steel are available in the PR01-84 series. Both the front flange and the rotary axis are made of chromium steel 1.4404 (V4A). The rotary axis is sealed against the stator.

For maintenance purposes, the front item of the flange, where the seals and guides are located, can be removed. The Linear Rotary Motor does not need to be removed from the system in order to remove the flange.

Figure: PR01-84x80-SSC-C/48x240F-C-150

Figure: PR01-84x with screwed-off front part of the flange

Front item of the flange, includes sealing and bearings, can be replaced easily. Normally the complete front item with all seals and bearings will be replaced. In case that the seals and bearings are only cleaned the following lubricant has to be used: "fin food Grease 2" from INTERFLON

## Notes on application of the PR01-84x80-SSC series

The design of the machine should consist of a 'normal' and a 'Stainless Steel' zone. The 'Stainless Steel zone' can be cleaned accordingly during operation. The two zones are separated by a Stainless Steel plate. The flange of the Linear Rotary Motor, also made of Stainless Steel, is inserted through this steel plate. The cylindrical front end of the flange has a groove with an O-ring that acts as a seal between the 'normal' and the Stainless Steel zones.

Figure: O-ring for sealing between 'normal' and 'Stainless Steel' zone.

## Notes on cleaning the SSC variants

Both the linear and rotary axis should not be set in motion while the line is being cleaned. It should be either fully extended or fully retracted. The chromium steel zone has IP67 class protection. The seals are made from FKM fluoroelastomer and 85 AU 20991 polyester-urethane rubber.

### **Note**

Linear Rotary Motor units with new or replaced seals will show an increased friction on both movements (linear and rotation) during the first hours of operation.

## Special Application

### Example: Linear Rotary Motors on a turntable

Figure: Linear Rotary Motors PR01-84 on turntable

Typical arrangement of a system with Linear Rotary Motors and drives on a turntable. The lowest turntable is the divider between the 'Stainless Steel' and 'normal' zones. The drives for actuating the motors are located above the Linear Rotary Motors.

## Cam profile for E-stop in applications with rotary disk

A fast turning rotary disk can not be stopped quickly during a loss of power emergency. This means the Linear Rotary Motor could be damaged if the rod is unpowered in the extended position and collides with other fixtures or tooling. An emergency guide profile at the point of possible collision helps to solve this situation by lifting the slider motor into the up position to prevent damage to other machinery.

The following picture shows a possible application of a Cam Kit MF01-PK84 (Item No. 0250-2324). Cam Kit forces the Linear Rotary Motor through the pulley upwards.

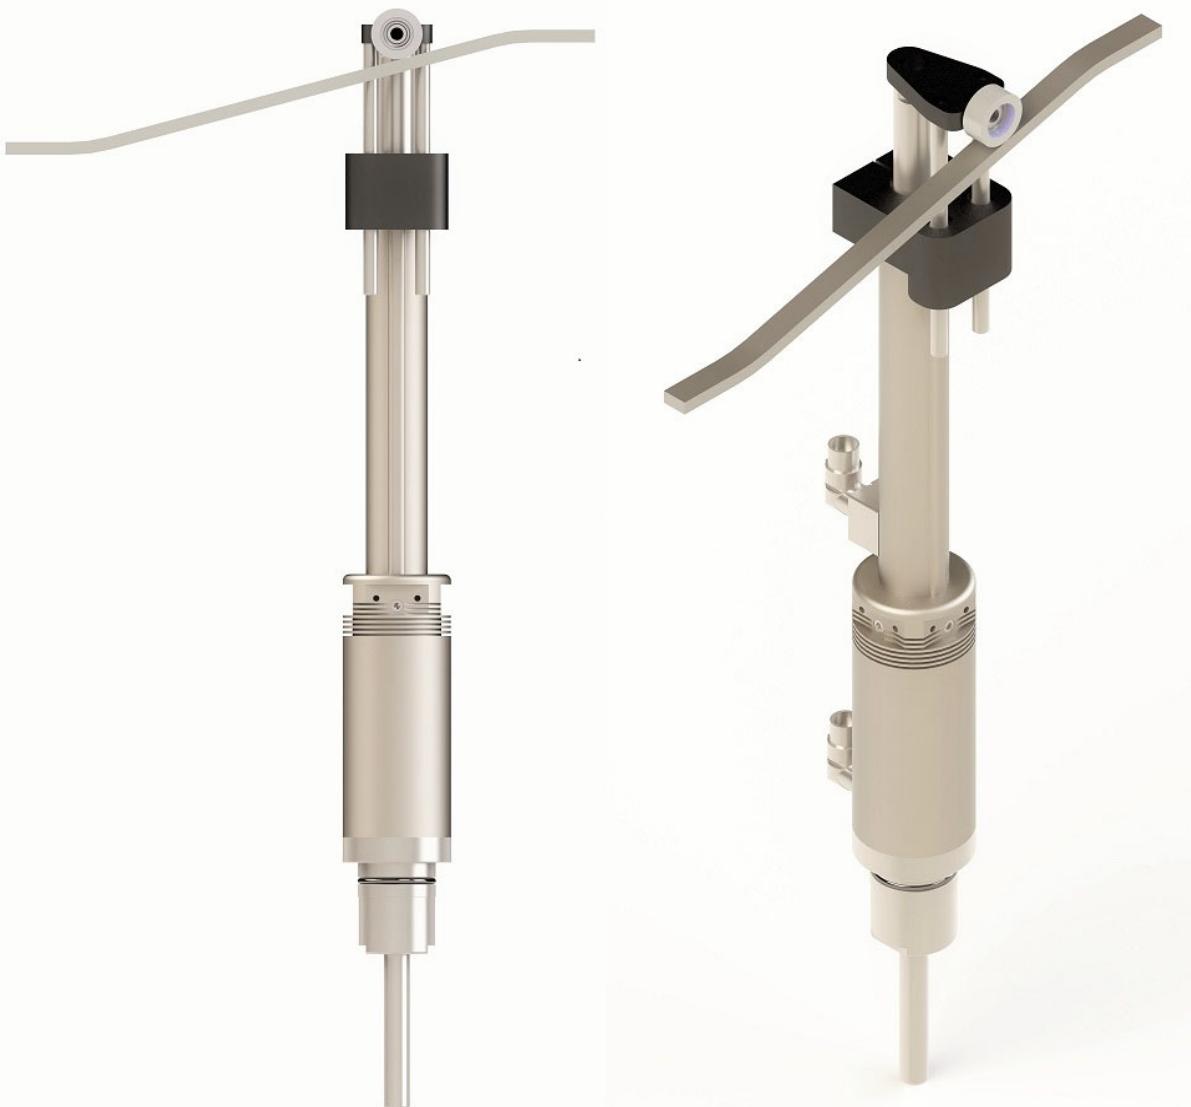

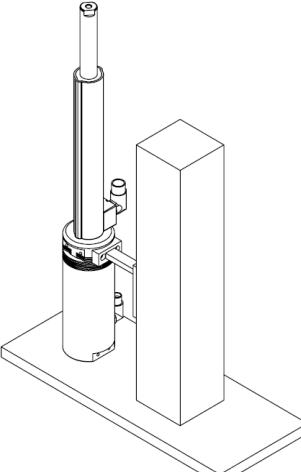

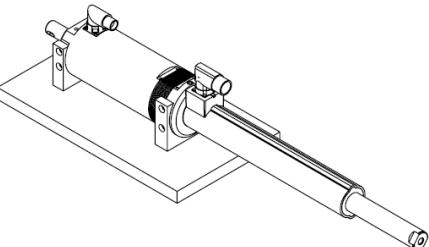

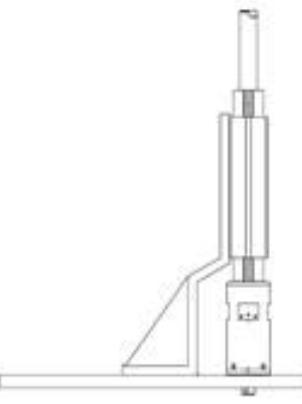

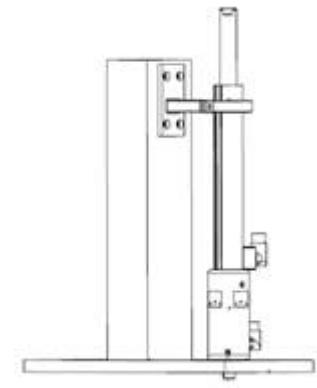

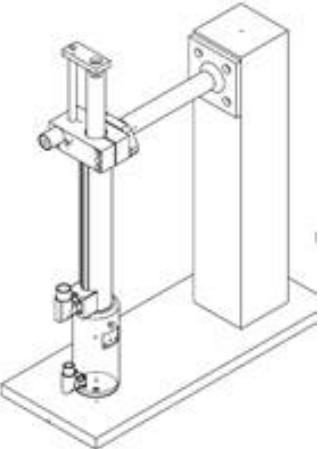

Figure: At the critical position the crank forces the moving Item of the Linear Rotary Motor up in case of a power breakdown. (Caution: Mechanical end stop is not shown!)

Caution: Make sure that the Cam Kit or any other auxiliary equipment that pulls or pushes the Linear Rotary Motor upwards has its own mechanical stop. Linear Rotary Motor internal collisions may not be used as an end stop in any case. Using Linear Rotary Motor internal collisions may damage the unit. In addition, the motor must be supported (see chapter Installing Linear Rotary Motors) to absorb any side load of the crank.

## Installing Linear Rotary Motors

The PR01 Linear Rotary Motors have a center fit on the front side so that the rotary axis can be precisely aligned. Due to the narrow construction of the Linear Rotary Motors, it is most often not sufficient to mount them by the front bolts alone (due to vibration or lateral loads). An additional support is then necessary. From a technical point of view the support should be done at the end of the motor to reduce any oscillations. Note that tolerances must be compensated (e.g. through long holes) to eliminate any tension to the motor between the two mounting points. The following sketches show examples of the various possibilities. The chapter on installation drawings contains detailed dimensions.

 A technical sketch showing a linear rotary motor mounted on a base plate. A vertical rectangular support is attached to the side of the motor's housing, providing lateral stability.	Front mounting with side support
 A technical sketch showing a linear rotary motor mounted on a base plate. The motor is positioned horizontally, and its side mounting holes are used for mounting. A note indicates to compensate tolerance using washers if necessary.	Bottom mounting, mounted through Linear Rotary Motor side mounting holes  Compensate tolerance using a washers (if necessary), when the Linear Rotary Motor is fixed through bottom mounting holes
 A technical sketch showing a linear rotary motor mounted on a base plate. The motor is angled, and heat sinks are attached to the side of the motor's housing to provide support and heat dissipation.	Angle and heat sinks support

## Wipers

The rotary axis is protected against dirt and loss of grease by a wiper on the front side. The back side of the linear motor slider should also be protected by means of a wiper. The options 'wiper' and 'multifunctional flange' are available for this.

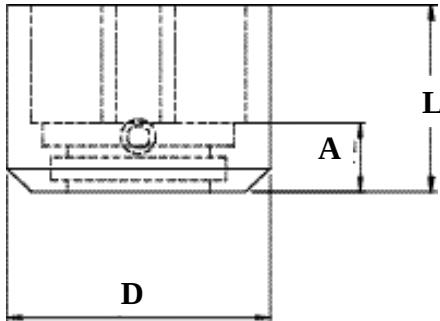

Figure: Dimensions and PR01-84x with PA01-48/28-F

	Description	Item No.	D	L	A	Mass
Wipers for model PR01-52 PS01-37x120F-HP-C-..	PA01-37/20-F	0150-3126	45 mm (1.77in)	32 mm (1.26in)	12 mm (0.47in)	0.028kg
Wipers for model PR01-84 PS01-48x240F-C-... PS01-48x360F-C-...	PA01-48/28-F	0150-3127	58 mm (2.28in)	32 mm (1.26in)	14 mm (0.55in)	0.056kg

## Multifunction flange and MagSpring

The multifunctional flange can perform one or more of the following functions:

- Wiper for the linear motor slider
- Mounting a MagSpring spring for load compensation
- Mounting a pneumatic brake
- Mounting element for the Linear Rotary Motor

## Mounting/Orientation of the accessories

MagSpring, Cam Kit and Brake-Kit can be assembled on both sides or back of the Linear Rotary Motor.

Figure: (left to right) "assembled on right side (Assembling Item No. 0140-0002)", "on back side (Item No. 0140-0003)" and "on left side (**Default**, Item No. 0140-0004)"

**NOTE: If there is no assembling Item No. or any information placed in order regarding assembling, ordered accessories will be shipped separately.**

## Direction force of the MagSpring

Depending on the orientation of the MagSpring slider, the direction of the force can be defined. This means that the MagSpring pulls the rotary axis of the Linear Rotary Motor inward, or pushes it outward.

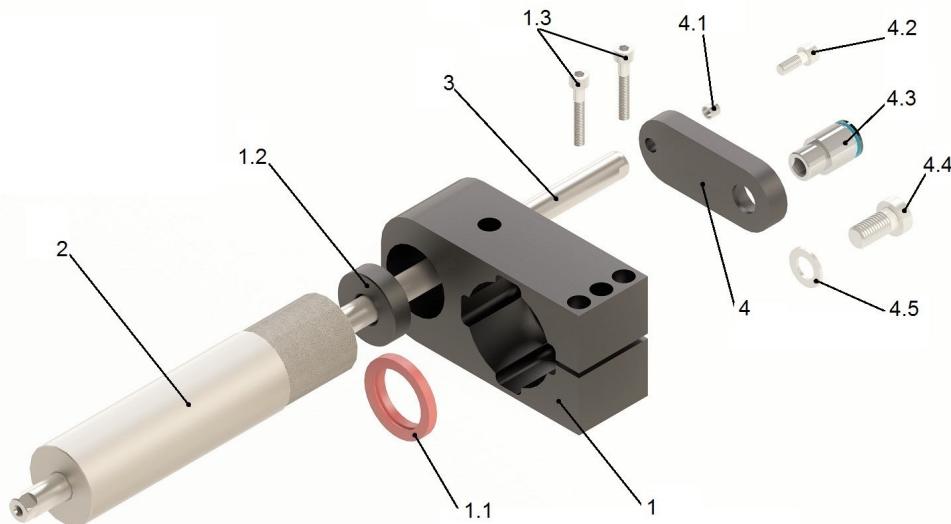

Left: 'Pushing' MagSpring (Assembling Item No.: 0140-0005)  
Right: 'Pulling' MagSpring (Assembling Item No.: 0140-0006) (**Default**)

Specially by using a MagSpring for the weight balancing and no payload is attached, the MagSpring may shoot the rod into the internal stop and damage the unit! Use an external stop ring attached to the rod to prevent this situation

Figure: External stop ring attached to the rod

## Overview MagSpring UNO

1	Linear Rotary Motor MagSpring force direction: pull	0140-0006	Assembly instructions, see page 39

## Load attachment

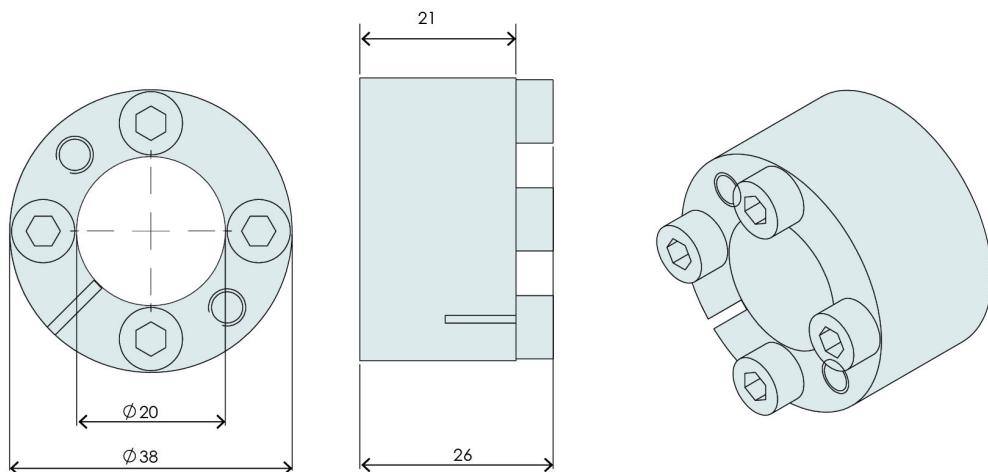

Because both a rotary and a linear motion are performed, the type of attachment must be selected such that it can support both torques and longitudinal forces.

Clamp sets that enable fast, easy mounting of the load Mass are available as accessories. They provide a force-fit connection that is created by two conical rings. This completely eliminates the need for inserting lugs or producing grooves.

### RS01-SS12x22 Clamp set for model 52

### RS01-SS12x38 Clamp set for model 84

### Technical data and mounting instruction

Artikel	Art.-No.	T	F <sub>ax</sub>	T <sub>A</sub>	D	Mass
RS01-SS12x22	0230-0101	24 Nm	4 kN	1.2 Nm	22H9 mm	22 g
RS01-SS20x38	0230-0100	179 Nm	17 kN	10 Nm	38H9 mm	100 g

T = transmittable torque at F<sub>ax</sub> = 0.

F<sub>ax</sub> = transmittable axial force at T = 0.

T<sub>A</sub> = fastening torque of the screws.

D = external exposure tolerance.

**Mounting:** The locking assembly has to sit inside the bore by at least the clamp lenght (13 mm, resp. 21 mm). Slightly oil the locking assembly before mounting, do not use molybdenum disulphide or fat. Tighten the screws evenly and crosswise in several steps.

## Connector assignment

### Connector assignment Linear Motors

Stecker Typ	C-Connector
	Pin
<b>Phase 1+</b>	A
<b>Phase 1-</b>	B
<b>Phase 2+</b>	C
<b>Phase 2-</b>	D
<b>+5V</b>	E
<b>GROand*</b>	F
<b>Sensor Sinus</b>	G
<b>Sensor Cosinus</b>	H
<b>Temp. Sensor</b>	L
<b>Shield*</b>	Casing

### Connector assigment Rotary Motors

Stecker Typ	C-Connector	R-Connector
	Pin	Pin
<b>Phase A</b>	A	1
<b>Phase B</b>	B	2
<b>Phase C</b>	C	3
<b>NC</b>	D	4 (not connected)
<b>+5V</b>	E	A
<b>GROand*</b>	F	B
<b>Sensor Sinus</b>	G	C
<b>Sensor Cosinus</b>	H	D
<b>Temp. Sensor</b>	L	E
<b>Schirm*</b>	Gehäuse	Gehäuse

Extension cables are double shielded. The two shields of the extension cables must not be connected together: The inner shield of the extension cables is used as GROand and must be connected to GROand\*, only the outer shield must be connected to SHIELD\* of the connectors.

**Caution:** Do not connect or disconnect motor when there is power on the controller.

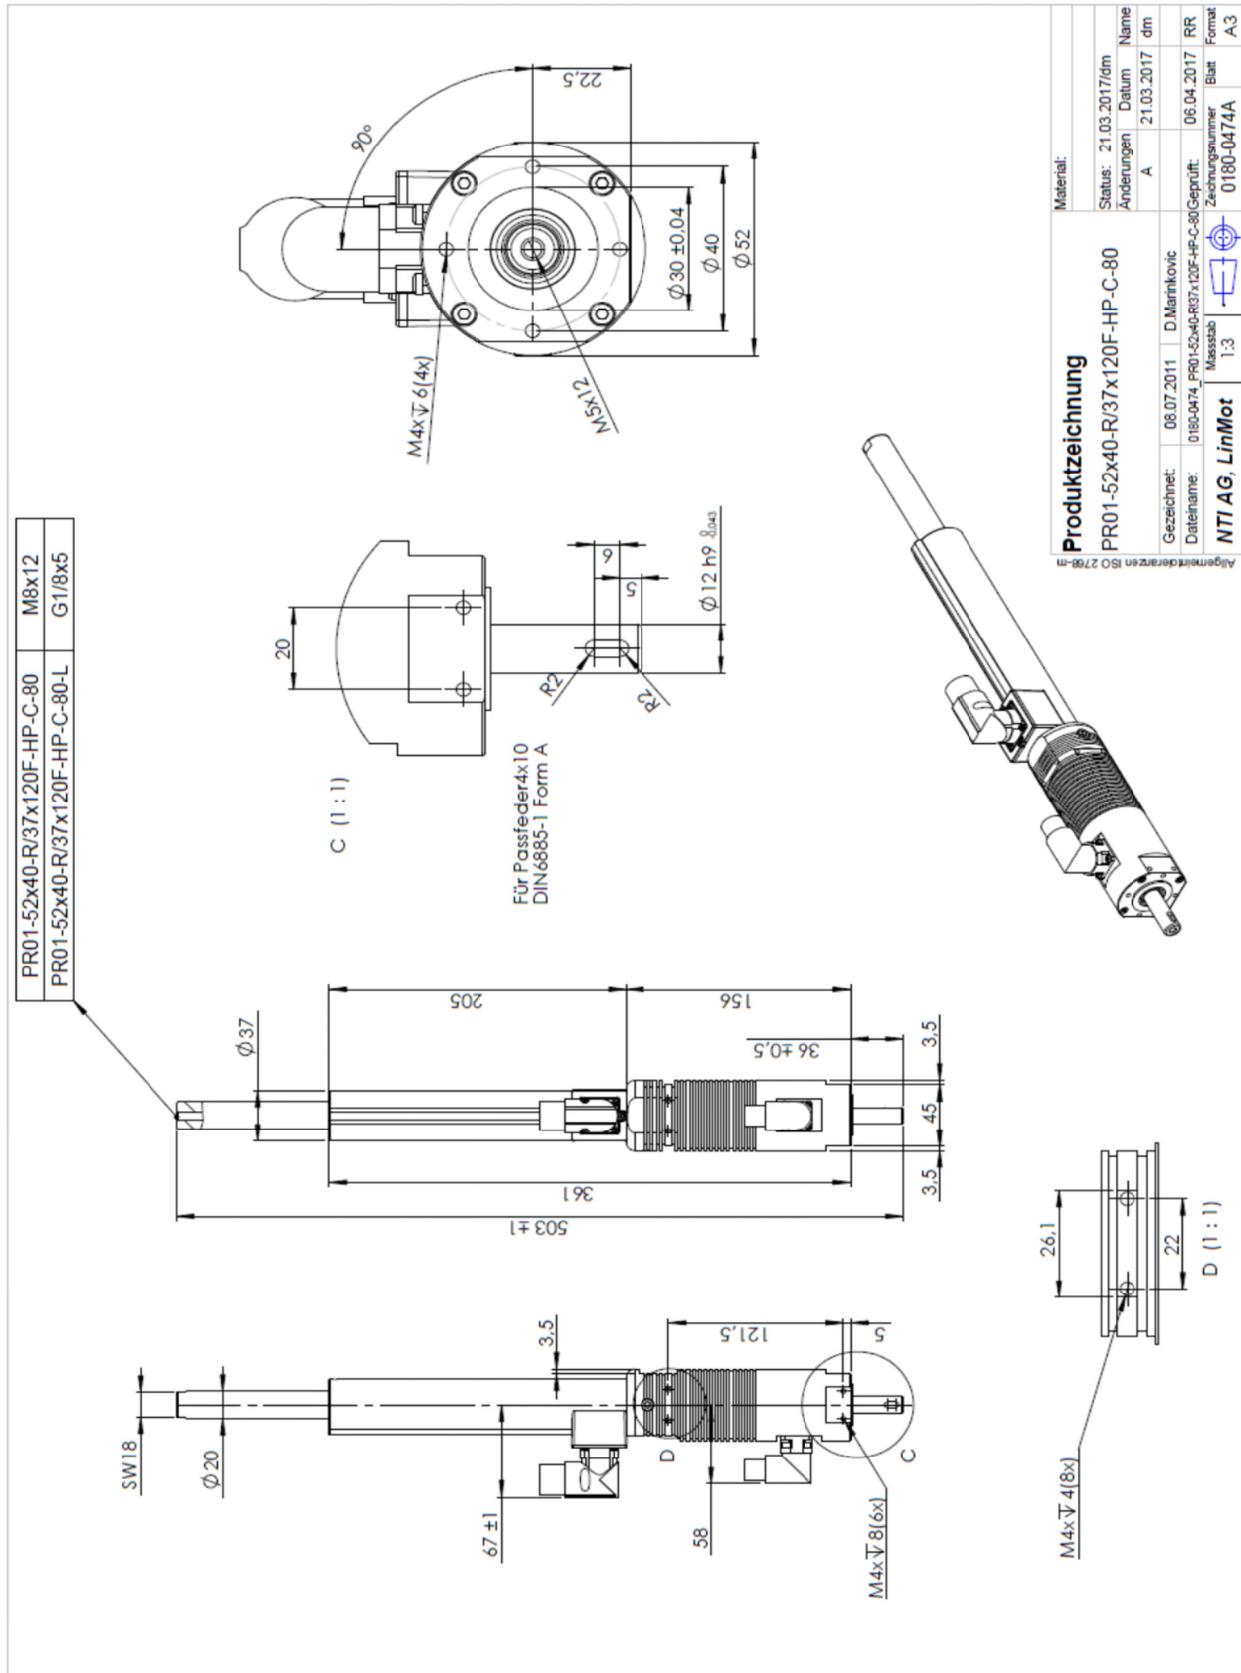

Double-check each connection!

Wrong connections can destroy controller and stator!

## Maintenance of LinMot® Linear Rotary Motors

LinMot Stators will be shipped with an initial lubrication. Maintenance will only be required if the motors run 'dry' or there is a heavy pollution of the motors.

Under normal industrial conditions (5 day, 8h/day) one inspection every 3 months is adequate. Where conditions differ, as with severe and permanent fouling, direct sunshine, operation out in the open, increased operating temperature etc., the maintenance intervals must be shortened till empirical values for the Itemicular application are obtained.

### Inspection

Inspections have to be executed according to the operating condition and the load of motors. Following points have to be checked during inspection:

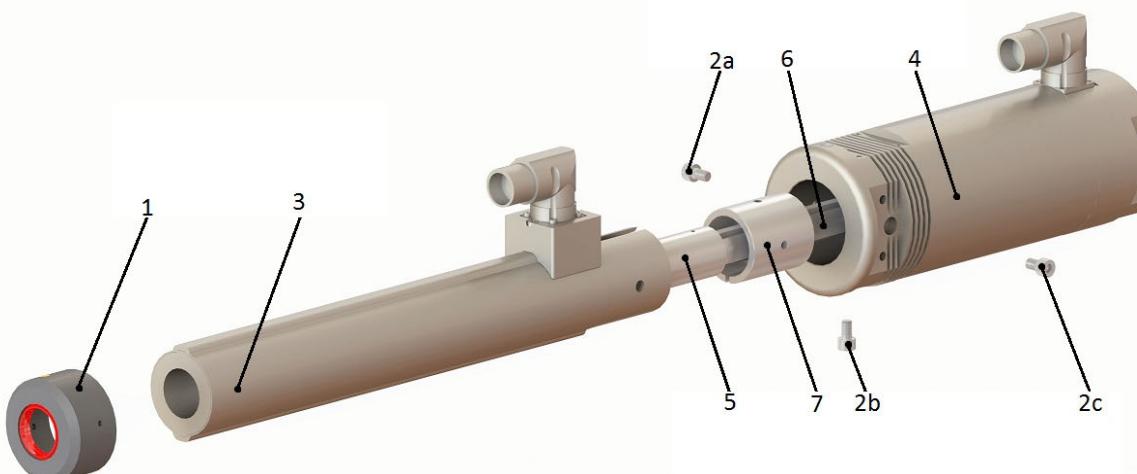

- Is a film of lubricant on the slider?
- Is the wiper (if existent) without visible wear?
- Is the lubricant not adhesive?
- Can the slider and rod be moved easily?

If the motors are heavily polluted respectively if no film of lubricant is on the slider, then stators and sliders must be cleaned and lubricated again.

### Cleaning and lubrication

#### Disassembling and cleaning

If existing, remove wiper (1) from the stator. Open fastening screws (2a, 2b and if existing 2c) between rotary motor and linear motor. Pull the stator (2) rapidly back over the slider (5) to prevent sticking to the Stator (3). Don't attempt to loosen the slider (5) from the rod (6). Attention: huge magnetic attraction of the slider! Clean slider (5), stator (3) and grooves (6) with cleaning agent LU06.

## **Lubrication and assembling**

Lubricate the grooves (6) with 2-3 g (0.1 oz.) LU02. Lubricate the bore of the stators (3) with about 2-3 g (=0.1 oz.) lubricant LU02. There should only be a slight film of lubricant. Do not over lubricate! Lubricate the slider (5) with a soft fabric or manually. 4g (0.14 oz.) of lubricant per meter slider is enough to create a film of lubricant on the surface of the sliders. Do not over lubricate! Especially in higher operating temperatures, over lubrication can lead to a gumming of the lubricant. (In such a situation the motor must be cleaned completely.) If wipers are used then the inner side of the seals of the wipers must be lubricated as well. Do not lubricate outside of the wipers!

Assembling: move the mounting ring (7) adjusted into the stator (3). Make sure that the slider (5) is centered with a cardboard or wood wrapping because of the magnetic attraction to the outside of the stator (3). Then move the stator (3) over the slider (5). Tighten the fastening screws 2a and 2b simultaneously to make sure the slider, stator, and rotary motor are concentric. If existing then tighten screw 2c lightly in the same manner. Use bolt lock (medium).

## **Lubricant**

The lubricant reduces the friction between the chromium-nickel steel surface of the slider and the reinforced plastic plain bearing.

***LinMot® Lubricant LU02 Art. No. 0150-1953 (8g)***

***LinMot® Lubricant LU02 Art. No. 0150-1954 (50g)***

***LinMot® Lubricant LU02 Art. No. 0150-1955 (1000g)***

*LinMot® LU02 Lubricant corresponds to KLÜBERSYNTH UH1 14-31 which was developed for the food processing industry.*

## **Cleaning Agent**

The following Cleaning Agent spray is recommended for LinMot Stators and Sliders:

***LinMot® Spray LU06-250 (250ml) Art. No. 0150-2394***

*LinMot® LU06 Lubricant corresponds to KLÜBERSYNTH NH1 4—2 which was developed for the food processing industry.*

## **Storage / transport**

· Sliders are to be stored and transported only in the plastic containers (with cardboard inlay) provided for this, or already fitted in *LinMot®* motors and secured.

· Maximum storage temperature: 70 °C

## Trouble Shooting

### Trouble Shooting of Linear Motors

The following tables show the resistive value between the different connector pins for each stator type. If the value is not in a range of +/- 10% the stator may be damaged (temperature of the stator for all measurements: 20°C).

#### PS01-37x120F-HP-C-80 / -100 / -150

Phase1+ / Phase1-	Pin A / Pin B	2.6Ω

## Caution: Handling Instructions for Sliders

### **LinMot Slider**

LinMot® Linear Motor sliders must be handled with care especially if not assembled within the stator! Damaging or warping of the slider can result in shortened life and/or failure of the motor. The slider is essentially a high-precision machine component consisting of neodymium magnets and plastic materials assembled in a thin steel tube. Do not use sliders who are already damaged on the surface (scratches, deformation, etc.). This can provide a further damage of the stator! Keep slider away from unshielded flame or heat. Temperature of more than 120°C will cause demagnetization.

### **Magnetism**

LinMot® sliders contain neodymium magnets which may disturb or damage magnetic data carriers and delicate electronic equipment merely by coming close to them. Examples for such equipment are: television and computer monitors, credit cards and EC-cards, computers, floppy discs and other data storage medium, video tapes, mechanical watches, hearing devices and loudspeaker. Heart pacemakers can be disturbed by strong magnets. Keep a minimum distance of 1m.

### **Crushes**

When handling sliders be aware that, due the strong magnetic attraction, serious injury from fingers being pinched between the slider and nearby steel items is a very real possibility if caution is not exercised.

### **No modification of sliders provided by customers is allowed!**

Do not modify the slider in any way. Any modification could destroy the included magnets and magnet dust can be build. Magnet dust is easily inflammable! NdFeB-Magnets are not made of steel. These magnets are sintered and due to that highly breakable.

### **Liability**

NTI AG / LinMot (LinMot) is not responsible for any damages caused by improper use, application, or handling of LinMot manufactured or supplied materials and is not responsible for any consequential damages of any sort relating to the use of LinMot products.

LinMot's warranty is limited to repair or replacement as stated in our standard warranty policy as described in our "terms and conditions" previously supplied to the purchaser of our equipment (please request copy of same if not otherwise available). Product warranties are void if LinMot products are used with stators, sliders, or controllers not manufactured by LinMot unless such use was specifically approved by LinMot.

A copy of this notice must be attached to each motor and/or machine that the purchaser provides to others.
