

GRIPPER GM50

- ✓ Electric gripper with additional magnetic holding force
- ✓ Highly dynamic gripping, closing and opening times of less than 20 ms
- ✓ Smooth gripping thanks to freely programmable motion profiles
- ✓ Free finger positioning and force control via servo motor
- ✓ Maintains MagSpring force in case of power failure, easy manual opening
- ✓ Clever design for neat cable routing directly with trailing chain connection
- ✓ Low power consumption in open and closed position
- ✓ Compatible with all common fieldbuses

GRIPPER GM50

Gripper GM50

The LinMot GM50 gripper is a highly dynamic solution for demanding applications. With extremely fast closing and opening times of less than 20 milliseconds, it enables efficient and reliable gripping. Freely programmable motion profiles can be used to make the gripping process particularly gentle, making it easier to handle sensitive objects. The gripper's servo motor allows individual finger positioning and adjustable force control, so gripping can be customised.

A special safety feature is the ability to maintain the MagSpring gripping force even in the event of a power failure, while the gripper can be easily opened by hand. The clever design ensures tidy cable routing with direct connection to trailing chains, making installation easy. The GM50 also consumes minimal power in both open and closed positions and is compatible with all common fieldbus systems, ensuring seamless integration into existing automation solutions.

Combination with guides and modules

The combination of the GM50 parallel gripper with the FM01 and EM01 guides and the DM01 and DM03 modules enables complete pick-and-place applications thanks to the simple coupling and modular design of the LinMot components. The GM50 is also available with passive load compensation (MagSpring). A combination that offers maximum precision, speed and safety even under the most demanding conditions.

CALCULATION OF THE LOAD MOMENTS

L: Distance to the point at which the load is applied (mm).

Model	Allowable vertical load Fv (N)	Maximum allowable moment		
		Pitch moment Mp (Nm)	Yaw moment My (Nm)	Roll moment Mr (Nm)
GM50-23	147	1.32	1.32	2.65
GM50-37	343	3.0	3.0	6.0

Values for load and moment in the table indicate static values.

Calculation of allowable external force (when moment load is applied)	Calculation example
$\text{Allowable load } F \text{ (N)} = \frac{M \text{ (maximum allowable moment) (N} \cdot \text{m)}}{L \times \frac{10^{-3}}{*}}$ (*Unit conversion constant)	When a static load of = 10N is operating, which applies pitch moment to point L = 30mm from the GM50-23 guide. $\text{Allowable load } F \text{ (N)} = \frac{1.32}{30 \times 10^{-3}} = 44.0 \text{ (N)}$ Load $f = 10 \text{ (N)} < 44.0 \text{ (N)}$ Therefore, it can be used.
