1 General Information

1.1 Introduction

This manual includes instructions for the assembly, installation, maintenance, transport, and storage of linear guides / linear modules grippers. The document is intended for electricians, mechanics, service technicians, and warehouse staff.

Read this manual before using the product and observe the general safety instructions and those in the relevant section at all times.

Keep these operating instructions in an accessible place and make them available to the personnel assigned.

1.2 Explanation of Symbols

Triangular warning signs warn of danger.

Round command symbols tell what to do.

1.3 Qualified Personnel

All work such as installation, commissioning, operation and service of the product may only be carried out by qualified personnel.

The personnel must have the necessary qualifications for the corresponding activity and be familiar with the installation, commissioning, operation and service of the product. The manual and in particular the safety instructions must be carefully read, understood and observed.

1.4 Liability

NTI AG (as manufacturer of LinMot and MagSpring products) excludes all liability for damages and expenses caused by incorrect use of the products. This also applies to false applications, which are caused by NTI AG's own data and notes, for example in the course of sales, support or application activities. It is the responsibility of the user to check the data and information provided by NTI AG for correct applicability in terms of safety. In addition, the entire responsibility for safety-related product functionality lies exclusively with the user. Product warranties are void if products are used with stators, sliders, servo drives or cables not manufactured by NTI AG unless such use was specifically approved by NTI AG.

NTI AG's warranty is limited to repair or replacement as stated in our standard warranty policy as described in our "terms and conditions" previously supplied to the purchaser of our equipment (please request copy of same if not otherwise available). Further reference is made to our general terms and conditions.

1.5 Copyright

This work is protected by copyright.

Under the copyright laws, this publication may not be reproduced or transmitted in any form, electronic or mechanical, including photocopying, recording, microfilm, storing in an information retrieval system, not even for training purposes, or translating, in whole or in part, without the prior written consent of NTI AG.

LinMot® and MagSpring® are registered trademarks of NTI AG.

2 Safety Instructions

Contusions

Sliders contain neodymium magnets and have a strong attractive force. Careless handling could cause fingers or skin to become pinched between two sliders. This may lead to contusions, bruises, and bone fractures. When handling sliders, wear thick protective gloves and keep a minimum distance between sliders. Refer to the "Minimum distance from slider" section for minimum distance.

To reduce the risk of injury, never more than one slider should be held or transported by the same person without packaging.

Pacemaker / Implanted Heart Defibrillator

Sliders could affect the functioning of pacemakers and implanted heart defibrillators. For the duration of a strong approach to a magnetic field, these devices switch into test mode and will not function properly.

- If you wear one of those devices keep the following minimum distances between the pacemaker / defibrillator and slider:
 - Min. 250 mm (10") for slider Ø 27 mm and 28 mm (PL01-27 / 28 / PL10-28)
 - Min. 150 mm (6") for slider Ø 19 mm and 20 mm (PL01-19 / 20)
 - Min. 100 mm (4") for slider Ø 12 mm (PL01-12)
- Inform others who wear these devices to comply with these minimum distances!

Caution - Risk of Electric Shock !

Before working, make sure that there are no high voltages.

Fast-moving Machine Parts

The sliders of LinMot linear motors are fast-moving machine parts. All necessary precautions must be taken to prevent persons approaching the moving elements during operation (provide covers, guards, etc.).

Automatic Restart

The motors can start automatically under certain circumstances! If necessary, a corresponding warning symbol must be provided and protection against entering the hazardous area or a suitable safe electronic disconnection must be provided!

Risk of Injury due to a Defect or Fault

For areas where a defect or fault can result in substantial property damage or even serious personal injury, additional external precautions must be taken or devices must be installed to ensure safe operation even if a defect or fault occurs (eg. suitable safe electronic disconnection, mechanical interlocks, barriers, etc.).

Magnetic Field

Magnets integrated in the sliders produce a strong magnetic field. They could damage TVs, laptops, computer hard drives, credit and ATM cards, data storage media, mechanical watches, hearing aids, and speakers.

- Keep magnets away from devices and objects that could be damaged by strong magnetic fields.
- For the above mentioned objects, keep a minimum distance as described in the "Pacemaker / implanted defibrillator" section.
- For non-anti-magnetic watches, keep the double minimum distance.

**Combustibility**

When machining magnets, the drilling dust could easily ignite. Machining the sliders and the magnets they contain is not permitted.

**Burn Hazard**

During operation the slider can become hotter than 100 °C, which can cause burns if touched. All necessary precautions (e.g. covers, casing, etc.) must be taken to prevent contact with persons in the vicinity of the slider during operation.

**Grounding**

All metal parts that are exposed to contact during any user operation or servicing and likely to become energized shall be reliably connected to the means for grounding.

**Mechanical Handling**

Neodymium magnets are brittle and heat-sensitive.

Machining the sliders and the magnets they contain is not permitted.

- Colliding magnets could crack. Sharp splinters could be catapulted for several meters and cause eye injury.
- By machining the sliders, heat would result which demagnetizes the magnets.

**2S Stators**

Series 2S stators correspond mechanically to the respective standard stators and are to be handled in exactly the same way in terms of assembly.

For special features, please refer to the safety manual (Item-No. 0185-1174).

**Slider**

Linear motor sliders consist of a high-precision, thin-walled stainless steel tube in which the neodymium magnets are housed. The LinMot sliders should be handled with care.

Avoid contact with other sliders or iron parts as this can damage the magnets and the slider surface. Do not grip the sliders with pliers, as this can also damage the surface. Do not use sliders which are already damaged on the surface (scratches, deformation, etc.). This can cause further damage to the stator.

**Effects on People**

According to the current level of knowledge, magnetic fields of permanent magnets do not have a measurable positive or negative effect on people. It is unlikely that permanent magnets constitute a health risk, but it cannot be ruled out entirely.

- For your own safety, avoid constant contact with magnets.
- Store large magnets at least one meter away from your body.

**Temperature Resistance**

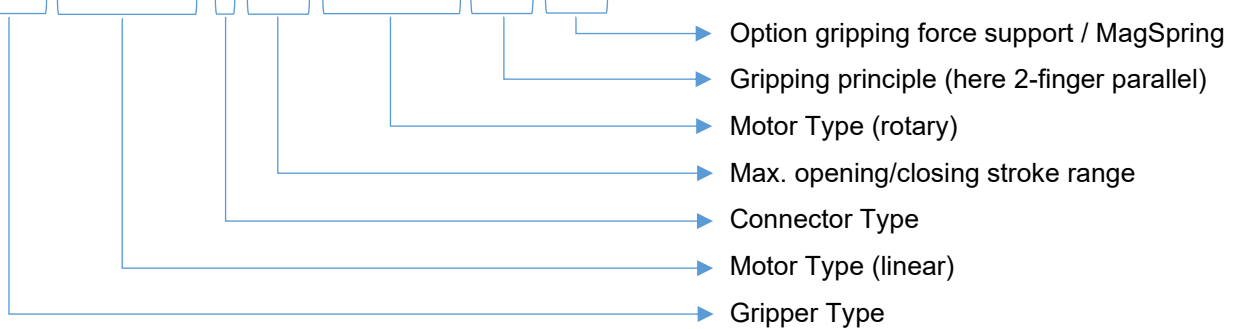

Keep slider away from unshielded flame or heat.

Temperature above 120°C will cause demagnetization.

3 Intended Use

3.1 Designation code

GM50-23Sx80F-XP-K-38-18-E50x08-NG-GT21-MSxx

3.2 Variations and identification

3.2.1 Identification by type plate

Designation type plate	Meaning
Top line	Gripper type
P/N	Item number gripper
S/N	Serial number gripper
Code	Code for internal use only
GP	Serial number gripper part
RP	Serial number rotary part

3.3 Product description Gripper GM50

The LinMot GM50 gripper is a highly dynamic solution for demanding applications. With closing and opening times of less than 20 milliseconds, it enables efficient and reliable gripping. Freely programmable motion profiles can be used to make the gripping process particularly gentle, making it easier to handle sensitive objects. The GM51 features an integrated rotary motor with endless rotation. This makes the gripper particularly well-suited to dynamic positioning, assembly and screwdriving tasks, offering high precision in angular positioning thanks to the absolute encoder's accuracy. Its clever design ensures clean cable routing with direct connection to drag chains, facilitating installation. In the park position, the GM51 consumes very little energy, is compatible with all common fieldbus systems and can be seamlessly integrated into existing automation solutions.

3.4 Operating conditions

- Ambient temperature limit is -10°C...80°C
- The maximum sensor temperature is 90°C
- The maximum installation altitude is 4.000 m above sea level. From 1.000 m, a reduction of 1 °C per 100 m must be taken into account for air cooling.

4 Installation Instructions

Before carrying out any of the following operations, all necessary precautions must be taken to ensure that the equipment is not in operation. Before installing the gripper, ensure that the equipment is voltage-free and that the safety measures in Chapter 2 are followed.

The GM51 gripper can be mounted on the front or side of either the LinMot mounting adapter or a customer-specific fixture. Detailed mounting dimensions can be found in Chapter 12. Corresponding CAD files are available in the LinMot eCatalogue at shop.linmot.com.

- The label on the mounting side must be removed before installation.
- The pins must be additionally secured against slipping out, e.g. with Loctite.

GM51-37

4.1 Mounting direction and MagSpring

4.1.1 Mounting direction

The GM50 gripper can be mounted in various directions. Please note that the weight of the slider acts either in the direction of the gripping force or against it. The mounting position therefore influences the gripping force.

Example 1: "Gripper at bottom" for vertical mounting. This is used for gripping, depositing, mounting, stacking, aligning and centring products.

Example 2: vertical mounting with a "gripper at the top". This is used for gripping, placing, mounting, separating, spreading, aligning and centring products.

Example 3: horizontal mounting, “gripper sideways”. This is used for gripping, separating, spreading, aligning and centring products.

4.1.2 Mounting direction with option MagSpring

The MagSpring option is a passive clamping force support integrated into the gripper based on a magnetic spring. The MagSpring provides additional clamping force when gripping from the outside and offers a special safety feature that maintains its clamping force in the event of a power failure. Meanwhile, the gripper can easily be opened by hand.

- The MagSpring is not designed to keep the gripper open when the power supply is interrupted. Its purpose is to increase and maintain the clamping force once the power supply is no longer available. Therefore, it cannot be guaranteed that the gripper will remain open.

- As the weight of the slider acts either with or against the MagSpring, the installation direction affects its performance.
- The effect of MagSpring also depends on magnetic tolerances and environmental conditions, such as temperature and humidity. Therefore, the behaviour described below cannot be guaranteed.

Effect of installation direction on open position (without power):

If the **gripper points downwards**:

- The weight of the slider counteracts the force of the MagSpring.
- When the gripper is not powered, the force of the MagSpring is generally insufficient to close the gripper.

When the **gripper points sideways**:

- The weight of the slider acts at a 90° angle to the force of the MagSpring.
- When the gripper is not powered, the force of the MagSpring is generally insufficient to close the gripper.

If the **gripper points upwards**:

- The weight of the slider acts in the same direction as the force of the MagSpring.
- If the gripper is not powered, the force of the MagSpring is generally sufficient to pull the gripper in the closing direction.

4.1.3 MagSpring force effect

In **area 1**, the MagSpring operates slightly in the direction of opening. This is the area where the gripper is in its rest position. (For more information on this, see Chapter 7.3.4).

In **area 2**, the MagSpring operates with increasing force in the closing direction.

The MagSpring option is only recommended for workpieces that are gripped from the outside. This is because the clamping force support acts in the closing direction. Therefore, the MagSpring option may not be suitable for applications where the workpiece is gripped from the inside.

4.2 Side mounting of the gripper

4.2.1 Fastening the mounting adapter

The side-mounting adapter for the GM51 gripper is attached to the end plate of the linear module using the included screws and pins.

Please note that the maximum torque must always be observed.

4.2.2 Mounting of the gripper on the right side of the module

The GM51 gripper is attached to the right side of the mounting adapter using the included screws and pins.

Please note that the maximum torque must always be observed.

4.2.3 Mounting of the gripper on the left side of the gripper

The GM51 gripper is attached to the left side of the mounting adapter using the included screws and pins.

Please note that the maximum torque must always be observed.

4.3 Frontal mounting of the gripper

4.3.1 Fastening the mounting adapter

The front mounting adapter for the GM51 gripper is attached to the end plate of the linear module using the included screws and pins.

Please note that the maximum torque must always be observed.

4.3.2 Mounting of the gripper

The GM51 gripper is attached to the front of the mounting adapter using the included screws and pins.

Please note that the maximum torque must always be observed.

5 Electrical Connection

Only connect or disconnect the motor connector when no voltage is applied to the servo drive. Only original LinMot cables may be used for wiring the motor. Pre-assembled cables may only be made from original LinMot accessories and must be carefully checked before commissioning.

Incorrect motor wiring can damage the motor and/or the servo drive!

5.1 Motor cable

Individual cable lengths are available **on request**.

5.1.1 Technical data

	Trailing chain cable			Robot cable
Cable type	KS03-09	KS05-09	KS05-04/05	KR03-09
Cable length	6 m*	6 m*	On request	6 m*
Cable diameter	6.7 mm (0.26 in)	7.6 mm (0.30 in)	9.5 mm (0.38 in)	7.4 mm (0.29 in)
Min. bending radius static	25 mm (0.98 in)	25 mm (0.98 in)	30 mm (1.18 in)	30 mm (1.18 in)
Min. bending radius moving	50 mm (1.97 in)	55 mm (2.17 in)	60 mm (2.36 in)	60 mm (2.36 in) Max. Torsion: ±180° pro 0.5 m**
Approval	UL / CSA 300V E172204	UL / CSA 300V E172204	UL / CSA 300V E172204	UL / CSA 300V E172204
Core insulation material	TPE-E	TPE-E	TPE-E	TPE-U
Cable jacket material	PUR			
Oil resistance	Very good according to DIN VDE 0282 Part 10 + HD 22.10			
Chem. resistance to: acids, alkalis, solvents, hydraulic fluid	Good			
Flammability	Flame retardant			

* Maximum length: 6 m. Longer cable lengths may result in reduced positioning accuracy, poor operating performance and increased susceptibility to interference in the motors.

** ±270°/0.5m permitted for initialisation.

5.2 Mounting the motor cable

- To prevent damage to the cable from vibration, the cable connection to the motor must not be subjected to alternating loads. When installing the gripper, ensure that the cable is fixed so that the minimum bending radius (see chapter 5.1.1 "Motor cable technical data") is not exceeded. In addition, the cable must not move at the motor connection.
- Make sure that the wires do not get caught underneath when installing the cover.

5.2.1 GM51-23

Position	Description
1	M2.5 x 20
2	M2.5 x 12
3	Cover
4	M2.5 x 16
5	Cable relief
6	Spacer sleeves
7	Cable with connector rotary motor
8	Cable with connector linear motor

5.2.2 GM51-37

Position	Description
1	M2.5 x 25
2	M2.5 x 20
3	Cover
4	M2.5 x 16
5	Cable relief
6	Spacer sleeves
7	Cable with connector rotary motor
8	Cable with connector linear motor

5.3 Stator connector assignment

Connector type	K-connector		N-/NG-connector	
Gripper type	GM51-23		GM51-23 / GM51-37	
	PIN	Wire	PIN	Wire
Phase1+	1	red	4	red
Phase1-	4	pink	3	pink
Phase2+	2	blue	2	blue
Phase2-	5	grey	1	grey
+5V	9	white	A	white
GROUND*	8	brown	B	inner shield
Sensor Sin.	6	yellow	C	yellow
Sensor Cos.	7	green	D	green
Temp sens	10	black	E	black
SHIELD* of stator and stator cable	Case	Shield	Gehäuse	Outer shield
Connector	<p>MC01-K/f</p>		<p>MC01-N/f</p>	

6 Calculation of the Load Moments

L: Distance to the point at which the load is applied (mm).

Model	Allowable vertical load Fv (N)	Maximum allowable moment		
		Pitch moment Mp (Nm)	Yaw moment My (Nm)	Roll moment Mr (Nm)
GM51-23	147	1.32	1.32	2.65
GM51-37	343	3.0	3.0	6.0

Values for load and moment in the table indicate static values.

Calculation of allowable external force (when moment load is applied)	Calculation example
$\text{Allowable load } F \text{ (N)} = \frac{M \text{ (maximum allowable moment) (N} \cdot \text{m)}}{L \times \frac{10^{-3}}{*}}$ <p>(*Unit conversion constant)</p>	<p>When a static load of = 10N is operating, which applies pitch moment to point L = 30mm from the GM50-23 guide.</p> $\text{Allowable load } F \text{ (N)} = \frac{1.32}{30 \times 10^{-3}} = 44.0 \text{ (N)}$ <p>Load f = 10 (N) < 44.0 (N)</p> <p>Therefore, it can be used.</p>

7 Start-up

7.1 General information

Please observe the following instructions to ensure that your LinMot GM51 gripper works optimally and safely. The following drawings show the most important points at a glance. This will ensure that your gripper works reliably and at its best.

Note for use with and without MagSpring

X DO NOT

press strongly for too long

✓ DO

press strongly for short times

X DO NOT

move fast into mechanical stop

✓ DO

keep distance when moving fast to mechanical stop

Note for use only with MagSpring

X DO NOT

park gripper fingers in the middle for too long

✓ DO

park gripper fingers as shown in installation guide

- With the MagSpring option, force is exerted across the stroke range in the closing direction. The parking position must be selected so that the force exerted by the MagSpring is low. This is to prevent the gripper from overheating. Suitable parking and gripping positions can be found in the relevant diagrams of the data sheet.
- The maximum gripping force should only be applied for a short time. Once the workpiece has been gripped successfully, the force must either be reduced to the nominal force or the workpiece must be released completely.
- When approaching the mechanical stops and when positioning and parking the gripping jaws, a distance of 0.2 mm must be maintained from the mechanical stops.

7.2 Setting the parameters

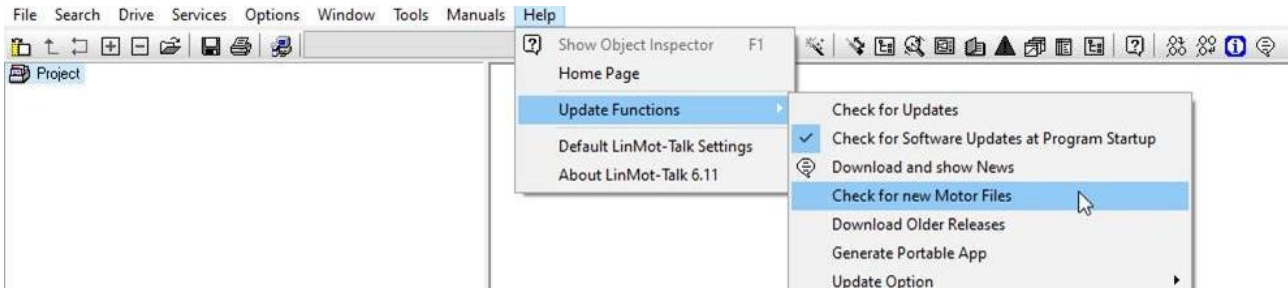

To configure the gripper, use the LinMot-Talk software from version 6.13. The software and the associated detailed user manual can be downloaded from <https://linmot.com/download/linmot-talk-drive-configuration/>

7.3 Plug-and-Play

LinMot gripper are plug and play. This means that they automatically log on to the drive. The module and motor specific parameters are automatically stored in the drive and the motor is ready for use.

If the motor file is not automatically found in the installation directory of the software, the file can be downloaded using the LinMot-Talk software, as shown below.

7.3.1 Application-specific parameters

Application specific parameters such as cable length, load mass, PID control settings etc. can be entered by the user via the Motor Wizard. Click on the Motor Wizard icon in the task bar of the LinMot-Talk software.

The Motor Wizard will guide the user through the menu step by step. The application parameters should be entered as accurately as possible to ensure the best possible motor control.

7.3.2 Referencing the gripper

The gripper's linear motor has a factory-referenced position detection system. This means that the gripper knows its position even after being switched off and on again, making its position absolute.

Note: If the slider is removed, the reference is lost and the gripper must be referenced again.

7.3.3 Current/force limitation of the gripper

The actuators are controlled by position specification as standard. If the actuator hits a mechanical stop or something gets in the way, the actuator will apply the maximum force/current to hold the position or follow the target position. The high current drawn over a long period of time will cause the actuator to heat up or overheat. For this reason the current consumption should be limited in certain cases:

- Positioning on a fixed stop
- Gripping hard products
- Gripping sensitive products

Control example for smooth gripping

Before gripping, the gripping fingers are in the park position (rest position), in which the gripper is open and not under the influence of the MagSpring force. Without the MagSpring option, any position can be considered the park position. To grip, the gripper fingers are moved to the gripping position with the desired movement parameters and set current limit. The gripper fingers then press onto the object being gripped with the set current limit. The force acting on the gripper fingers can be found in the force/position diagram. The gripper is released by returning to the park position from the current gripping position.

Current limitation in LinMot-Talk

Function	Parameter	UPID
Bi-directional current limit	Maximal Current	13A6h
Positive current limit	Maximal Current Positive	13FCh
Negative current limit	Maximal Current Negative	13FDh

7.3.4 Gripper rest position with MagSpring load compensation option

The rest position of the gripper must be set to either fully in or fully out. In the centre position, the MagSpring applies a constant force which can cause the gripper to become very hot. In the fully in and fully out positions, no force is applied and the motor can cool down.

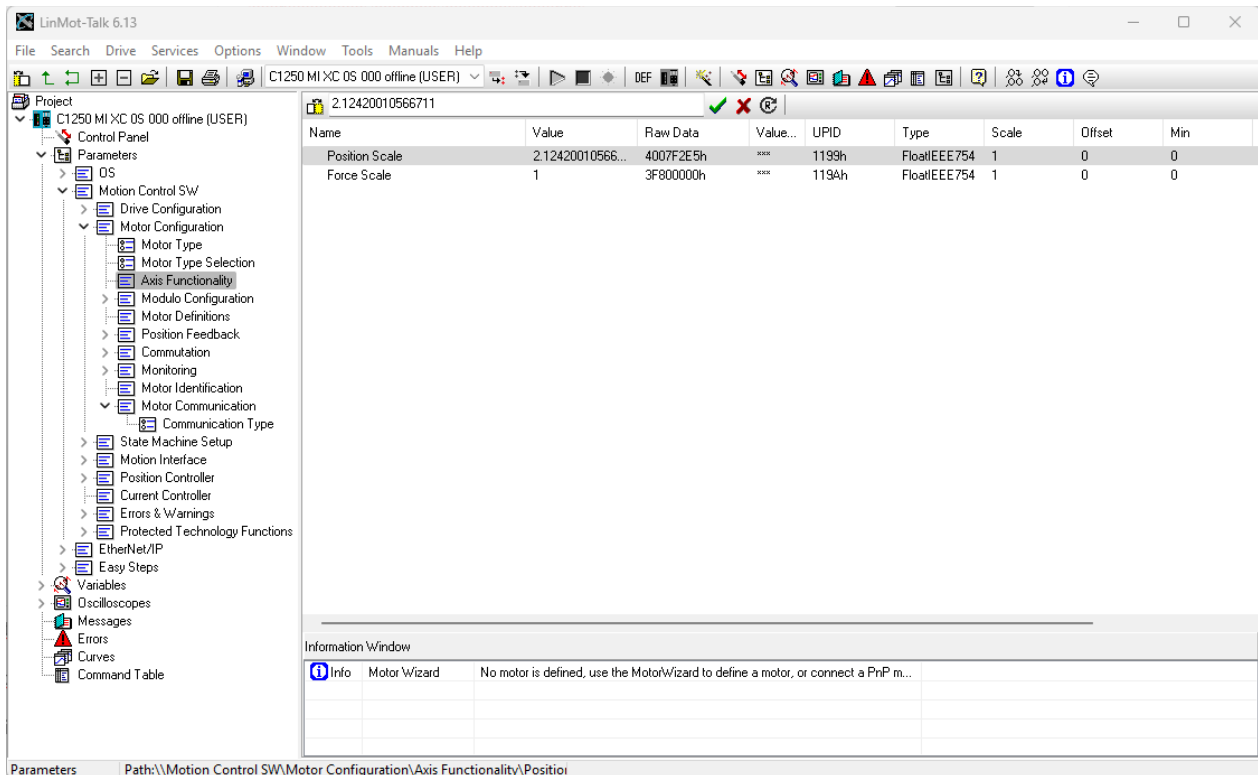

8 Parameters

8.1 Motor position/gripper finger position ratio

The linear motor movement is converted into gripper movement via a lever mechanism. The transmission ratio of the motor position to the gripper position is stored for each gripper and can be read from the corresponding parameters.

Example:

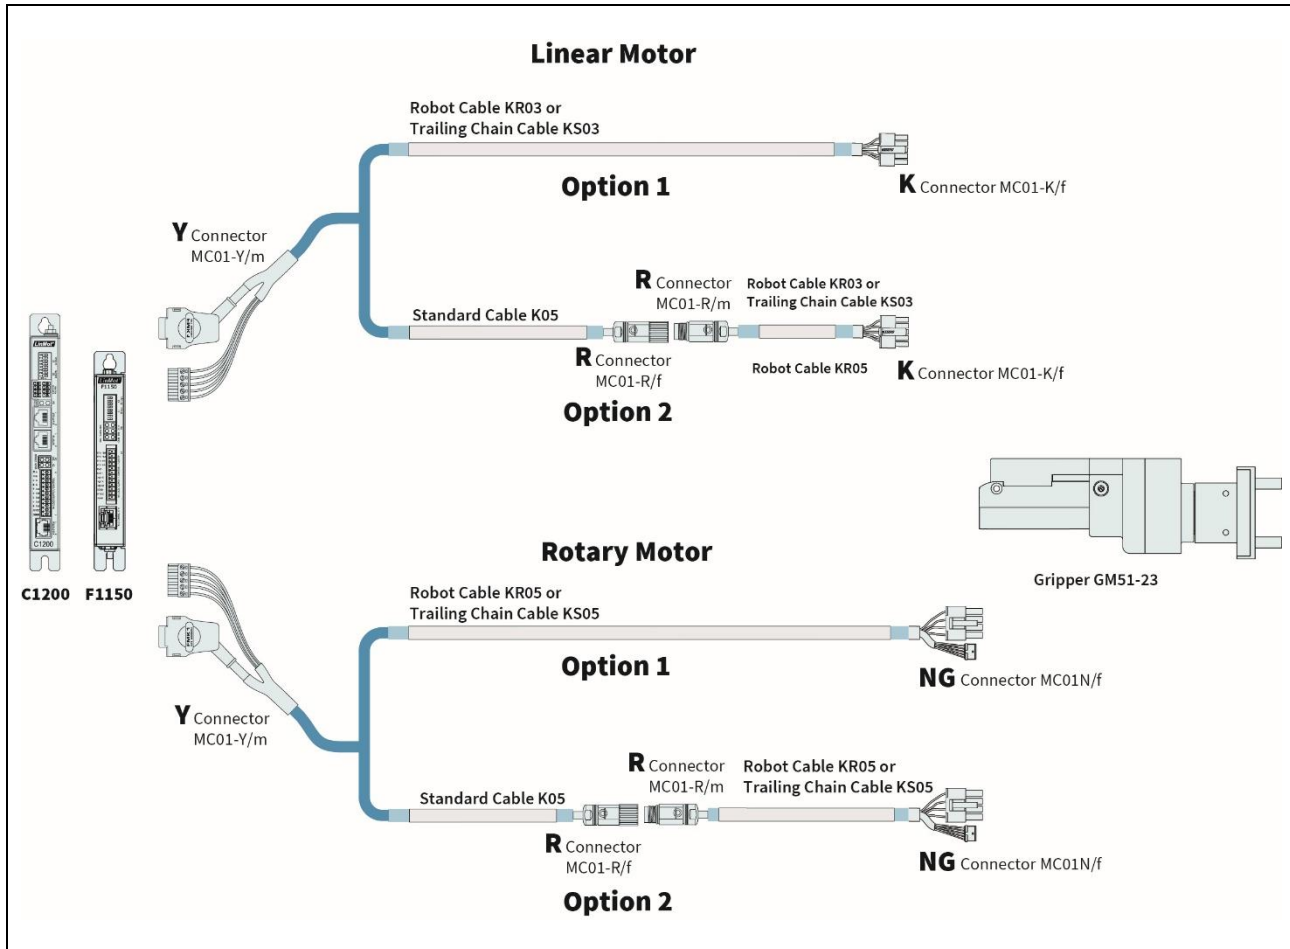

To open the GM51-23 gripper fingers by 10 mm, the motor must be moved by 4.8000 mm (10 mm / 2.08333).

Function	Parameter	UPID
Transmission ratio motor position to gripper position	Position Scale	1199h
Transmission ratio motor force to gripper force	Force Scale	119Ah

9 Accessories

Linear motor

Item	Description	Item-No.
KS05-Y/N-4	Trailing chain cable Y/N, 4 m	0150-2443
KS05-Y/N-6	Trailing chain cable Y/N, 6 m	0150-2444
KS05-Y/N-	Trailing chain cable Y/N, Custom length	0150-3509
KS05-09-R/N-1.5	Trailing chain cable R/N, 1,5 m	0150-3880
KS05-09-R/N-2	Trailing chain cable R/N, 2 m	0150-3881
KS05-09-R/N-3	Trailing chain cable R/N, 3 m	0150-3882
KS05-09-R/N-4	Trailing chain cable R/N, 4 m	0150-6793
KS05-09-R/N-6	Trailing chain cable R/N, 6 m	0150-6794
KS05-09-R/N-	Trailing chain cable R/N, Custom length	0150-3889
KR05-Y/N-	Robot cable Y/N, Custom length	0150-3514
KR05-R/N-	Robot cable R/N, Custom length	0150-3757
K05-Y/R-2	Motor cable Y/R, 2 m	0150-2421
K05-Y/R-3	Motor cable Y/R, 3 m	0150-4854
K05-Y/R-4	Motor cable Y/R, 4 m	0150-2422
K05-Y/R-6	Motor cable Y/R, 6 m	0150-2423
K05-Y/R-8	Motor cable Y/R, 8 m	0150-2424
K05-Y/R-	Motor cable Y/R, Custom length	0150-3501

Rotary motor

Item	Description	Item-No.
KS05-09-Y/NG-4	Trailing chain cable Y/NG, 4 m	0150-6797
KS05-09-Y/NG-6	Trailing chain cable Y/NG, 6 m	0150-6798
KS05-09-Y/NG-	Trailing chain cable Y/NG, Custom length	0150-6799
KS05-09-R/NG-1.5	Trailing chain cable R/NG, 1,5 m	0150-6570
KS05-09-R/NG-2	Trailing chain cable R/NG, 2 m	0150-6571
KS05-09-R/NG-3	Trailing chain cable R/NG, 3 m	0150-6572
KS05-09-R/NG-4	Trailing chain cable R/NG, 4 m	0150-6795
KS05-09-R/NG-6	Trailing chain cable R/NG, 6 m	0150-6796
KS05-09-R/NG-	Trailing chain cable R/NG, Custom length	0150-6565
KR05-Y/NG-	Robot cable Y/NG, Custom length	0150-6800
KR05-R/NG-	Robot cable R/NG, Custom length	0150-6808
K05-Y/R-2	Motor cable Y/R, 2 m	0150-2421
K05-Y/R-3	Motor cable Y/R, 3 m	0150-4854
K05-Y/R-4	Motor cable Y/R, 4 m	0150-2422
K05-Y/R-6	Motor cable Y/R, 6 m	0150-2423
K05-Y/R-8	Motor cable Y/R, 8 m	0150-2424
K05-Y-Fe/R-	Motor cable Y/R, Custom length	0150-3501

9.3 Trailing chain kit GM51-23

The TufLok screws needed to attach the trailing chain are included in the trailing chain kit. If different screws are used, the nuts fastening the trailing chain to the gripper housing cover must be secured separately (e.g. with Loctite). Without this additional securing measure, the nuts can come loose and fall into the motor.

Item	Description	Item-No.
GM51-23-TC-26x12.5	Trailing chain kit for gripper GM51-23	0150-6443

9.3.1 Dimensions

9.3.2 Overview trailing chain kit

Pos.	Item
1	Connector cover with trailing chain adapter
2	Trailing chain
3	Tuflok countersunk screw with hexagon socket without shank M3x8 / ISO 14581
4	Pan head screw with hexagon socket without shank M3x8 / ISO 14583
5	Trailing chain plate
6	Cylinder screw with hexagon socket without shank M4x10 / ISO 4762
7	Trailing chain angle plate
8	Washer without chamfer / ISO 7089
9	Hexagon nut M3 / ISO 4032

9.4 Trailing chain kit GM51-37x60

The TufLok screws needed to attach the trailing chain are included in the trailing chain kit. If different screws are used, the nuts fastening the trailing chain to the gripper housing cover must be secured separately (e.g. with Loctite). Without this additional securing measure, the nuts can come loose and fall into the motor.

Item	Description	Item-No.
GM51-37-TC-26x12.5	Trailing chain kit for gripper GM51-37x60	0150-6587

9.4.1 Dimensions

9.4.2 Overview trailing chain kit

Pos.	Item
1	Connector cover with trailing chain adapter
2	Trailing chain
3	TufLok countersunk screw with hexagon socket without shank M3x8 / ISO 14581
4	Hex nut M3 / ISO 4032
5	Cylinder screw with hexagon socket without shank M4x10 / ISO 4762
6	Countersunk screw with hexagon socket without shank M3x8 / ISO 14583
7	Trailing chain angle plate
8	Hex nut M3 / ISO 4032

9.5 Trailing chain kit GM51-37x120

The TufLok screws needed to attach the trailing chain are included in the trailing chain kit. If different screws are used, the nuts fastening the trailing chain to the gripper housing cover must be secured separately (e.g. with Loctite). Without this additional securing measure, the nuts can come loose and fall into the motor.

Item	Description	Item-No.
GM51-37x120-TC-26x12.5	Trailing chain kit for gripper GM51-37x120	0150-6752

9.5.1 Dimensions

9.5.2 Overview trailing chain kit

Pos.	Item
1	Connector cover with trailing chain adapter
2	Trailing chain
3	TufLok countersunk screw with hexagon socket without shank M3x6 / ISO 14581
4	Hex nut M3 / ISO 4032
5	Countersunk screw with hexagon socket without shank M3x8 / ISO 14583
6	Cylinder screw with hexagon socket without shank M4x10 / ISO 4762
7	Trailing chain angle plate
8	Hex nut M3 / ISO 4032

9.6 Mounting adapter GM51-23

9.6.1 Adapter for frontal mounting

9.6.2 Adapter for frontal mounting (alternative mounting without trailing chain)

9.7 Mounting adapter GM51-37

9.7.1 Adapter for side mounting

9.7.2 Adapter for frontal mounting (alternative mounting without trailing chain)

10 Maintenance

10.1 Maintenance cycles of the gripper

The plain bearings of the GM51 gripper are provided with initial lubrication at the factory. The lubrication and inspection intervals depend primarily on the average moving speed, the operating temperature and the general ambient conditions. The following table with the inspection intervals is based on normal industrial, Central European conditions (5-day week with 8 hours operating time per day) and the use of the recommended bearing grease LU04.

Gripper module with plain bearings

Velocity [v]	Inspection interval [cycles]
$v < 1 \text{ m/s}$	14.3 Mio.

Basically, the inspection cycle of the actuator unit must be shortened if there are heavy loads or deviating conditions. These are e.g.:

- Permanent soiling
- Direct sunlight
- Low humidity
- Outdoor operation
- Increased operating temperature
- Strong shocks or vibrations

It is recommended that inspection, assembly and disassembly of the gripper modules be carried out by the following trained companies:

- LinMot
- Companies qualified by LinMot

However, assembly, disassembly and inspection can also be carried out by the customer. (see chapters 10.2 to 10.4). Please note that improper inspection, assembly or disassembly can lead to premature wear of the wearing parts and/or damage to the gripper module and/or its components and may invalidate the warranty.

10.2 Inspection

To ensure the best possible trouble-free operation, a preventive inspection is recommended every 6000 hours of operation or after one year.

The following points should be checked when inspecting the actuators:

- Visual inspection of all wearing parts (replace if necessary)
- Preventive replacement of seals and wipers
- Cleaning of mechanical moving parts
- Replacement and maintenance of ball / plain bearings if necessary

10.3 Troubleshooting

The following points must be checked during the troubleshooting:

Problem	Solution
Do the gripper fingers have too much or too little play?	Yes -> Check the screw connections as shown.
	
Has the slider of the linear motor been relubricated?	No -> Remove the motor from the gripping unit, dismantle the slider, clean and lubricate it.
Can the guide unit be moved smoothly?	No -> Remove the gripping unit from the motor, check and gently align.
Does the slider rotate when the gripping unit is turned?	Yes -> Check the connection between the linear motor and rotary motor and realign.

10.4 Cleaning and lubrication

10.4.1 Cleaning and lubrication of the linear motor

1. Loosen the connecting element and carefully pull the slider out of the stator. **Caution:** Large magnetic attraction forces (see warning on p. 5). If necessary, cover nearby iron structures with non-magnetic material (e.g. wood).
2. Clean the slider and stator with soft disposable paper, ideally with the aid of LU06 cleaning spray (alternatively methylated spirits or alcohol).
3. Carefully push the slider into the stator.
4. Check the friction over the entire stroke and remove excess grease and dirt when moving the slider.

Caution! Avoid over-greasing! Over-greasing can lead to gumming of the grease, especially at higher operating temperatures. Remove excess grease while moving the slider.

10.4.2 Cleaning and lubrication of the gripping unit

Lubrication of the gripping unit is optional, but can have a positive effect on the sensitivity of the gripper. This is particularly the case if product detection is to be based on current consumption, as the motor current is influenced by the force of movement, dry friction, sliding friction and external forces. A light film of grease reduces friction, allowing for more delicate and sensitive force transmission.

When operating with the recommended greases, it should be made aware that the relubrication intervals are strongly dependent on the operating and ambient conditions. In addition to the drive loads in the form of stroke kilometres, speeds and surface pressure, the ambient conditions, such as temperature, draught, humidity and general contamination, also play a decisive role. It is therefore advisable to inspect the specific application regularly and to determine the relubrication intervals from this. The inspection intervals can be extended in stages.

1. Remove the old grease on the guide rods ideally with the help of LU06 cleaning spray (alternatively e.g. petroleum ether) with a soft cleaning cloth or paper towel.
2. Move the moving part of the gripping unit back and forth several times so that the bearings are also degreased. **Note:** It is generally not necessary to dismantle the gripper.
3. Grease the gripping mechanism carefully and completely with grease (Lever mechanism -> LU07 / Linear ball bearing LU11). Move the moving part of the gripper back and forth. Remove any grease that has been wiped off. There should only be a thin film of grease on the guide rods.

Ordering information

Item	Description	Item-No.
LU06-250	Klüberfood NH1 4-002 Spray* (250 ml)	0150-2394
LU04-50	Lubricant for linear motors** (50 g)	On request
LU04-1000	Lubricant for linear motors** (1000 g)	On request
LU07-400	Interflon Food Grease 2 for INOX (400 ml)	0150-2744
LU11-1000	ELKALUB VP874 (1000 g)	0150-6972
* LinMot Spray LU06 is identical with KLÜBERFOOD NH1 4-002 (Food grade UH1 approval).		
** LinMot Grease LU04 is identical KLÜBERSYNTH UH1 14-31 (Food grade UH1 approval).		

11 Storage and Transport

- The storage area must be dry, dust-free, frost-free and vibration-free.
- The relative air humidity should be less than 60 %.
- Prescribed storage temperature: -15 °C...70 °C
- The motor must be protected against extreme weather conditions.
- The air in the storage area must not contain any harmful gases.

**This is to certify that
representative samples of** NDMM2 - Incomplete Rotating Machines and Rotating
Machine Parts - Component
See Addendum Page for Product Designation(s).

Have been investigated by UL in accordance with the
component requirements in the Standard(s) indicated on
this Certificate. UL Recognized components are incomplete
in certain constructional features or restricted in
performance capabilities and are intended for installation in
complete equipment submitted for investigation to UL LLC.

Standard(s) for Safety: UL 1004-1, 2nd Ed., Issue Date: 2012-09-19, Revision
Date: 2020-11-05

Additional Information: See the UL Online Certifications Directory at
<https://iq.ulprospector.com> for additional information

This *Certificate of Compliance* does not provide authorization to apply the UL Recognized Component Mark.
Only the UL Follow-Up Services Procedure provides authorization to apply the UL Mark.

Only those products bearing the UL Recognized Component Mark should be considered as being UL Certified
and covered under UL's Follow-Up Services.

Look for the UL Recognized Component Mark on the product.

14 EU Declaration of Conformity CE-Marking

NTI AG / LinMot ®
Bodenaeckerstrasse 2
8957 Spreitenbach

Switzerland

Tel.: +41 (0)56 419 91 91

Fax: +41 (0)56 419 91 92

declares under sole responsibility the compliance of the products:

- 2-finger rotary gripper of the **GM51** series

with the EMC Directive 2014/30/EU.

Applied harmonized standards:

- **EN 61000-6-2: 2005 (Immunity for industrial environments)**
- **EN 61000-6-4: 2007 + A1: 2011 (Emission for industrial environments)**

According to the EMC directive, the listed devices are not independently operable products.

Compliance of the directive requires the correct installation of the product, the observance of specific installation guides and product documentation. This was tested on specific system configurations.

The safety instructions of the manuals are to be considered.

The product must be mounted and used in strict accordance with the installation instructions contained within the installation guide, a copy of which may be obtained from NTI AG.
