LinMot Eplan Macros

Content of the ZIP archive

Classification: [x] Public
                       [ ] LinMot internally

1 Content of the ZIP Archieve

The LinMot macro archive contains this document (DE/EN) and the folders "AllMacros", "MacroToolSetup" and "MacroTool".
If you simply want to use all macros, you can continue as described in chapter 1.1.
If you only want to simply select the macros required for your project in advance, proceed as described in Chapter 1.2.

1.1 Complete LinMot macro file collection

In the "AllMacros" folder you will find the subfolder "LinMot" in which all macros are located. You can copy this folder directly into your EPlan master data directory "Macros". The folder name "LinMot" is then automatically the reference for the article master data. These are completely contained in the file Linmot_Articles.xml. You must then import this article data into your EPlan system using the article master data wizard.
The individual macro files are sorted into subfolders for better handling when using macros directly.

1.2 LinMot macro file selection tool

To select individual macros directly instead of transferring all macros to your EPlan System, you can install the LinMot macro tool which is located in the "MacroTool" folder.

With the help of this tool you can extract a list / collection of required macros specifically for use in EPlan. Detailed instructions can be found in the program under the menu item "Help" or by pressing "F1".

The tool allows you to extract the required macros and / or article master data based on a parts list or an existing LinMot quotation.

1.2.1 Use "LinMot Macro file selection tool " without installation

To use this tool, you must
- have at least the Microsoft .NET 4.0 runtime environment installed
- have write access to this folder, because the tool has to create a configuration file

In the "MacroTool" folder you can start the tool directly by double-clicking "LinMot_EPLAN_MacroTool.exe".

1.2.2 Use "LinMot Macro file selection tool " with installation

You can have this tool installed directly from the "MacroToolSetup" folder by double-clicking on "Setup.exe". If the minimal .NET 4.0 framework is not available, you will be automatically prompted to download / install the required runtime environment.
After installation, the program can be used via the start menu. To uninstall, select this tool under "Settings -> Apps" for uninstallation.

2 Version History

Version	Date	Author	Description
1V0	02.06.2020	mr	Initial version
1V0.0.1	03.12.2020	mr	New products added
